

## Flits : basic design

**Design Concept :** We design “Flits” with a focus on what has a message in the shape itself and what makes people happy when they see it. We hope that the entire event venue will be filled with happiness through the Wonder Flight production.

New designs are under development!

Styrofoam of material is flame retardant!

"Flits" are made of materials that are difficult to ignite. Even if "Flits" touches the flame, in most cases it will only melt and not burn.

## Print Option

From you to your guests ... Print messages on "Flits"

For customers who want to print original designs

We accept printing of original designs created by users. The Flits design template (EPS file) is available on our website, so please download it and use it when creating your design. Design samples are also available for your reference.

specification		
FLITS	Material	Flame retardant blended polystyrene foam
	Combustion quality	Self-digestion measurement value 3 seconds or less (Standard: JIS A 9611)

WF Dimension,inc. ( From January 1, 2020 )

Produced by T-K'S,inc.( Current company name )
